1.3.1 Cross-cutting issues relevant to professional ethics, gender, human values, environment and sustainability integrated into the curriculum

SUBJECT: PHYSIOLOGY

Programme	Course type	Course number	Course Title	Cross-cutting Issues			
				Professional ethics	Gender	Human values	Environment and sustainability
BSc General	Discipline Specific Elective	DSE1A	Sports Physiology, Work Physiology and Ergonomics				The components of ergonomics and anthropometry in the course focus on environment and sustainability. The basic concepts of ergonomics and their application in industry to improve efficiency are studied in this course. The importance of ergonomics in ensuring occupational health and well-being, improving the physical work environment, protecting against occupational hazards (both physical and biochemical), and occupational diseases like silicosis, asbestosis, and farmer's lungs, is studied in depth. Assurance of industrial safety is also an area of focus. The emphasis in ergonomics of mutual adaptability between humans and the environment is underscored.

SEMESTER-I

Course Structure

Course	Course Code	Name of the Subjects	Course Type/ Nature	Teaching Scheme in hour per week			Credit	Marks
				L	T	P		
CC1 [DSC-1A]		DSC-1AT: Cellular Physiology, Biophysical Principles, Biochemistry, Digestive system & Metabolism	Core Course-1	4	0	4	6	75
		DSC-1AP: Fresh tissue experiments & Identification of permanent slides						
CC2 [DSC-2A]		DSC-2A: TBD (from other Discipline)	Core Course-2				6	75
CC3 [DSC-3A]		DSC-3A: TBD (from other Discipline)	Core Course-3				6	
AECC (Elective)		English	AECC (Elective)	1	1	0	2	50
Semester Total							20	275

L=Lecture, T=Tutorial, P=Practical, CC = Core Course, TBD = To be decided, AECC (Elective) = Ability Enhancement Compulsory Course (Elective)

DSC-1 = Discipline Specific Core of Subject-1, DSC -2 = Discipline Specific Core of Subject-2, DSC -3 = Discipline Specific Core of Subject-3

SEMESTER- I

DSC-1A (CC-1): Cellular Physiology, Biophysical Principles, Biochemistry, Digestive system & Metabolism **Credits 06**

DSC1AT: Cellular Physiology, Biophysical Principles, Biochemistry, Digestive system & Metabolism **Credits 04**

Course Contents:

• Cellular Physiology and Biophysical Principles

Membrane physiology: structure and functions of cell- Endoplasmic reticulum, Golgi complex, Peroxisome, Mitochondria, Ribosome.

Tissue- Structure, classification, distribution and function of different human tissues. Physicochemical principles and Physiological importance of: Diffusion, Osmosis, Adsorption, Absorption, pH and buffers, Colloids.

Enzymes - classification, coenzymes, factors affecting enzyme action, Isozymes.

• Biochemistry and Metabolism:

Carbohydrates : classification , structure and properties

Proteins : Classification , order of structure (elementary idea), Amino acids: classification and properties **Lipids** : classification. Fatty acids – Classification, and properties, lipoprotein – Classification and structure **Nucleic acid** – structure of DNA and RNA

Vitamins – classification and functions. Minerals – functions of Sodium, Potassium, Calcium, Phosphorus, Iron, Zinc, Iodine and Fluoride.

Metabolism – Glycolysis, TCA cycle, Beta oxidation of saturated fatty acid, Ketone bodies – formation and significance. Deamination, Transamination. Amino acid pool, Urea cycle.

• Digestive System:

Alimentary canal and digestive glands – Structure in relation to functions. Composition, functions and regulation of secretion of digestive juices including bile. Digestion and absorption of carbohydrate, protein and lipid. Movements of the stomach and small intestine.

DSC1AP: Fresh tissue experiments & Identification of permanent slides (Practical) **Credits 02**

Contents:

1. Fresh tissue experiments:

- Study of compound microscope
- Examination & staining of fresh tissue: squamous, ciliated & columnar epithelium, skeletal muscle fibre (Rat/ Goat) by Methylene blue stain.
- Transitional epithelium, mesentery (Rat/ Goat) (counter stain by Methylene blue)

2. Identification of permanent slides:

- Lung, spleen, liver, salivary glands, pancreas, oesophagus, stomach, small intestine, large intestine, ovary, adrenal, testis, thyroid, spinal cord, cerebellum, cerebral cortex, kidney, skin, tongue

Suggested Readings:

1. Text book of Medical Physiology, by A.C. Guyton, John E. Hall, Eleventh edition. Elsevier Saunders.
2. Vander et al's Human Physiology: The Mechanisms of Body Function; 9th Edition Eric P. Widmaier, Hershel Raff, Kevin T. Strang The Mc Graw-Hill Companies.
3. Human Physiology, From Cells to Systems Lauralee Sherwood, Brooks/Cole.
4. Best & Taylor's Physiological Basis of Medical Practice, edited by B.R Brobeck. The William and Wilkins Co.
5. Ganong's Review of Medical Physiology, by Kim E. Barrett et al., Lange Medical Book.
6. Harper's Review of Biochemistry by R K. Murry and others. Lange Medical Book, Prentice-Hall International.
7. Lehninger Principles of Biochemistry, by, D. L. Nelson and M. M. Cox, CBS Publishers Inc.
8. Text book of Biochemistry, by E.S. West, W.R. Todd, H.S. Mason, J.T. Van Bruggen, The Macmillan Company.
9. Biochemistry, by D. Das: Academic Publishers.
10. Biophysics and Biophysical Chemistry, by D .Das, Academic Publishers.
11. Samson Wright's Applied Physiology, edited by C.A. Keele. E. Neil & N. Toets. Oxford University Press.
12. Physiology, by R.M. Berne & M.N. Levy, B.M. Koeppen, B. A. Stanton, Mosby Co.
13. Basic Histology, by L.C. Jungquire, J. Carneiro& J.A Long; Appleton & Lange.
14. Neuroscience Third Edition Edited By D. Purves, G. J. Augustine, D. Fitzpatrick, W. C. Hall, A S.I. Lamantia, J.O. Mcnamara, S. M Williams, Publishers Sinauer Associates, Inc.
15. Histology - A Text and Atlas, by M.H.Ross&E.J.Reith, The Williams and Wilkins Company.
16. Bailey's Text Book of Histology, revised by W.M. Copenhaver; The Williams and Wilkins Company.
17. Human Physiology, by R.F. Schmidt & G. Thews, Springer-Verlag.

DSC-1 = Discipline Specific Core of Subject-1, DSC -2 = Discipline Specific Core of Subject-2, DSC -3 = Discipline Specific Core of Subject-3

SEMESTER- II

DSC-1B (CC-4): Blood, body fluid and immune System, Cardiovascular System and Respiratory System
Credits 06

DSC1BT: Blood, body fluid and immune System, Cardiovascular System and Respiratory System
Credits 04

Course Contents:

Blood and Body fluids:

Blood : Properties of blood, Composition, character, properties and function of blood. Plasma proteins: origin, separation and functions. Plasmapheresis. Erythrocytes : Morphology, fate and functions. Erythropoiesis: Definition, steps of erythropoiesis, role of different factors on erythropoiesis. Haemoglobin: functions, derivatives. Abnormal haemoglobin. Anaemia: different types, Clinical significances. Leucopoiesis. Leucocytes : morphology, and functions. Phagocytosis, Inflammation. Leukaemia. Platelets: Structure, functions. Significance of platelets counts. Coagulation of blood: Mechanism of blood coagulation, factors affecting blood coagulations, Anticoagulants. Bleeding disorders, tests for bleeding disorders. Coagulation time, bleeding time, prothrombin time.

Blood groups - The ABO systems, The Rh systems, Importance of blood groups, Immunological basis of identification of ABO and Rh blood groups. Cross matching, Donor and Recipient. Blood transfusion- Precaution and hazards of blood transfusions. The RH system and pregnancy, Erythroblastosis foetalis. Blood volume: Normal value. Determination of blood volume. factors influencing blood volume, regulation of blood volume.

Body fluids: Intracellular and extra cellular compartment of body fluids. Lymph and tissue fluids: Composition, function and fate of lymph and tissue fluids.

Immune System

Immune system: Overview, properties of immune system, types of immunity : innate immunity, acquired immunity, active and passive immunity. First and second line defence. Humoral and Cell mediated immunity. Complement system. Immune Competent cells : structure and functions of neutrophil, B lymphocytes, T- lymphocytes (helper, cytotoxic and suppressor), Natural killer cells, monocytes – macrophages. Primary and Secondary lymphoid organs.

Antigen and Antibody : Properties of immunogen, antigens and haptens. Classification, structure and functions of immunoglobulins. Antigen- antibody reaction, physiological effects and clinical significances. Vaccination: Immunization- Passive and active immunization. Vaccine.

Cardiovascular system:

Cardiovascular system - Anatomy and histology of the heart. Properties of cardiac muscle. Origin and propagation of cardiac impulse. Electrophysiology of cardiac tissue. Heart rate and its regulations. Frank – Starlings law's of heart. Electrocardiography

Cardiac cycle: Events. Different phases and factors affecting. Heart sounds. Cardiac output: definition, factors affecting.

Pulse - arterial and venous. Blood pressure and its regulation and factors controlling. Baro and Chemoreceptor.

Respiratory System:

Anatomy and histology of the respiratory passage and organs. Role of respiratory muscles in breathing. Lung Compliance & surfactant, Significance of physiological and anatomical dead space. Lung volumes and capacities. Exchange of respiratory gases between lung and blood and between blood and tissues. Transport of oxygen and carbon dioxide in blood. Hypoxia, asphyxia, dyspnea, asthma, cyanosis, dysbarism.

DSC1BP: Practical

Credits 02

Contents:

Haematology:

1. Preparation of blood film of your own blood. Staining of the blood film with Leishman's stain. Identification of different types of blood corpuscles.
2. Determination of TC of RBC and WBC by haemocytometer.
3. Differential count of WBC.
4. Determination of ESR of human blood.
5. Estimation of haemoglobin by haemoglobinometer.
6. Preparation of haemin crystals.
7. Determination of Blood groups.
8. Determination of clotting time, bleeding time, prothrombin time.

Human Experiment:

1. Measurement of arterial blood pressure by Sphygmomanometer at rest and after exercise, Calculate the mean arterial blood pressure (MABP)
2. Measurement of heart rate and pulse rate (30 beats methods) during rest and exercise and graphical plotting.
3. Modified Harvard step test and determination of physical fitness.
4. Demonstration: Measurement of oxygen saturation by pulse oxymeter before and after exercise. Measurement of Peak Expiratory Flow Rate.

Suggested Readings:

1. Text book of Medical Physiology, by A.C. Guyton, John E. Hall, Eleventh edition. Elsevier Saunders.
2. Vander et al's Human Physiology: The Mechanisms of Body Function; 9th Edition Eric P. Widmaier, Hershel Raff, Kevin T. Strang The Mc Graw-Hill Companies.
3. Human Physiology, From Cells to Systems Lauralee Sherwood, Brooks/Cole.
4. Best & Taylor's Physiological Basis of Medical Practice, edited by B.R Brobeck. The William and Wilkins Co.
5. Ganong's Review of Medical Physiology, by Kim E. Barrett et al., Lange Medical Book.
6. Harper's Review of Biochemistry by R K. Murry and others. Lange Medical Book, Prentice-Hall International.
7. Lehninger Principles of Biochemistry, by, D. L. Nelson and M. M. Cox, CBS Publishers Inc.

8. Text book of Biochemistry, by E.S. West, W.R. Todd, H.S. Mason, J.T. Van Bruggen, The Macmillan Company.
9. Biochemistry, by D. Das: Academic Publishers.
10. Biophysics and Biophysical Chemistry, by D .Das, Academic Publishers.
11. Samson Wright's Applied Physiology, edited by C.A. Keele. E. Neil & N. Toets. Oxford University Press.
12. Physiology, by R.M. Berne & M.N. Levy, B.M. Koeppen, B. A. Stanton, Mosby Co.
13. Basic Histology, by L.C. Jungquire, J. Carneiro& J.A Long; Appleton & Lange.
14. Neuroscience Third Edition Edited By D. Purves, G. J. Augustine, D. Fitzpatrick, W. C. Hall, A S.I. Lamantia, J.O. Mcnamara, S. M Williams, Publishers Sinauer Associates, Inc.
15. Histology - A Text and Atlas, by M.H.Ross&E.J.Reith, The Williams and Wilkins Company.
16. Bailey's Text Book of Histology, revised by W.M. Copenhaver; The Williams and Wilkins Company.
17. Human Physiology, by R.F. Schmidt & G. Thews, Springer-Verlag.

SEMESTER- III

Course Structure

DSC-1C (CC-7): Nerve –Muscle Physiology, Nervous system, Skin and Body Temperature Regulation **Credits 06**

DSC1CT: Nerve –Muscle Physiology, Nervous system, Skin and Body Temperature Regulation **Credits 04**

Course Contents:

Nerve-Muscle Physiology:

Different types of muscle and their structures. Red and white muscles. Properties of muscle: all or none law, rheobase, chronaxie, summation, refractory period, tetanus and fatigue. Smooth Muscle: Morphology, Single-unit and multi-unit smooth muscle.

Mechanism of skeletal muscle contraction. Isotonic and isometric contraction..

Structure and classification of nerves. Nerve cells. Excitation & Conduction. Degeneration and regeneration of nerve fibre. Myelination. Origin and propagation of nerve impulse. Velocity of impulse in different types of nerve fibres. Properties of nerve fibre: all or none law, rheobase, chronaxie, refractory period.

Synapse: structure , functional anatomy, mechanism of synaptic transmission. Electrical Events at Synapses, Motor unit, motor point. EPSP, IPSP.

Neuromuscular junction: structure, mechanism of impulse transmission, end plate potential. A brief overview on neurotransmitters. Electromyography.

Nervous System:

A brief outline of organization and basic functions of the nervous system - central and peripheral nervous system. Structural organization of the different parts of the brain and spinal cord. Receptors : Definition, structure, classification, mode of action. Blockers and stimulators. Reflexes: Introduction, Monosynaptic Reflexe, Stretch Reflex, General Properties of Reflexes. Reflex action - definition, classification, properties, reflex arc.

Ascending and Descending tracts : Origin, course, terminations, and functions of pyramidal and pain pathway.

The Autonomic Nervous System - Introduction, Anatomic Organization of Autonomic Outflow, Chemical Transmission at autonomic Junctions.

CSF: composition, formation, circulation and functions.

Skin and Body temperature regulation:

Histological structure of skin. Colour of the skin. Organization of sweat gland. Composition and function of the sweat. Regulation of sweat secretion. Insensible and sensible perspiration. Composition and function of sebum. Triple response.

Normal body temperature. Channels of heat loss and heat gain process. Regulation of body temperature. Hypothermia and Hyperthermia. Physiological basis of fever. Cold stress. Insulating effects. Acclimatization to colds.

DSC-1CP: Practical

Credits 02

Contents:

Practical:

1. Isolation and Staining of nerve fibers with node(s) of Ranvier (AgNO₃).
2. Staining of skeletal and cardiac muscles by Methylene Blue stain.
3. Measurement of grip strength.
4. Recording of body temperature.
5. To study the response of the skin to blunt injury (triple response) (Demonstration)

Neurological experiments:

1. Experiments on superficial (plantar) and deep (knee jerk) reflex.
2. Reaction time by stick drop test.
3. Two point discrimination test.

Demonstration:

1. Study of Kymograph, Induction coil, Key and other instruments used to study mechanical responses of skeletal muscle.
2. Kymographic recording of mechanical responses of gastrocnemius muscle to a single stimulus and two successive stimuli.
3. Kymographic recording of the effects of variations of temperature and load (after load) on single muscle twitch.
4. Calculation of work done by the muscle

Skill Enhancement Course (SEC)

SEC- 1: Public Health and Epidemiology

Credits 02

SEC1T: Public Health and Epidemiology

Credits 02

Course Contents:

Principles of Epidemiology in Public Health: Overview of epidemiology methods used in research studies to address disease patterns in community and clinic-based populations, distribution and determinants of health-related states or events in specific populations, and strategies to control health problems

Statistical Methods for Health Science Analysis and interpretation of data including data cleaning, data file construction and management; implementation of analytic strategies appropriate for the type of data, study design and research hypothesis; parametric and nonparametric methods, measures of association, Linear and Logistic regression, Generalized Linear Modeling, and Survival analysis

Environmental Health. Effects of biological, chemical, and physical agents in environment on health (water, air, food and land resources); ecological model of population health; current legal framework, policies, and practices associated with environmental health and intended to improve public health.

Psychological, Behavioural, and Social Issues in Public Health. Cultural, social, behavioural, psychological and economic factors that influence health and illness; behavioural science theory and methods for

understanding and resolving public health problems; assess knowledge, attitudes, behaviours towards disease and patient compliance to treatment.

Management of Health Care Program and Service Organizations Techniques and procedures for monitoring achievement of a program's objectives, generating evidence of program effectiveness, assessing impacts in public health settings; evaluation of framework that leads to evidence-based decision-making in public health. Organizational principles and practices including organizational theory, managerial role, managing groups, work design, and organization design at primary, secondary, and tertiary levels of care

Epidemiology of disease. Contemporary methods for surveillance, assessment, prevention, and control of infectious and chronic diseases, disabilities, HIV/AIDS; understanding etiology; determining change in trend over time; implementation of control measures.

Suggested Readings:

1. Gordis Leon. Epidemiology (Fifth edition), Elsevier Saunders.
2. Dona Schneider and David E. Lilienfeld. Lilienfeld's Foundations of Epidemiology, Fourth Edition, Oxford University Press, USA.
3. Porta Miquel. A Dictionary of Epidemiology, Oxford University Press, USA,
4. Somerville Margaret, et al., Public Health and Epidemiology at a Glance, Second Edition, Wiley-Blackwell.
5. Beaglehole. R. Bonita, et. al Basic Epidemiology, 2nd Edition, WHO Publication, Geneva.
6. Spasoff R.A. Epidemiologic Methods for Health Policy, Oxford University Press.
7. Barkar, D.J.P., Practical Epidemiology: Churchill pub, Livingstone.
8. Knox E. G. Epidemiology in health care planning: A Guide to the Uses of a Scientific Method, Oxford University Press, USA.

OR

SEC-1: Environmental Epidemiology

Credits 02

SEC1T: Environmental Epidemiology

Credits 02

Course Contents:

Introduction, Definitions, man - environment relation.

Principles- an epidemic and ingredients - and types of studies – Descriptive, analytical- cohort.

Environmental hazards and Public health management: Sources of Environmental hazards. Dose response relationship. Pollution: Air, water, noise pollution sources and effects. Waste management and hazards: Types and characteristics of wastes, biomedical waste handling and disposal, nuclear waste handling and disposal, Waste from thermal power plants. Case histories on Bhopal gas tragedy, Chernobyl disaster, and Three Mile Island accident and their aftermath. Diseases: Socioeconomic factors and health impacts of different diseases: Infectious (Bacterial-Tuberculosis, Typhoid; Viral - AIDS, Poliomyelitis, Hepatitis; Protozoan- Malaria); Lifestyle and Inherited/genetic diseases.

Suggested Readings:

1. Anisa Basheer, Environmental Epidemiology, Pointer Pub.
2. R.Beaglehole, R. Bonita & T. Kjellstrom Epidemiology WHO Publ., Current edition.
3. Epidemiology of Occupational Health, WHO publication.
4. Rose, G. The Strategy of Preventive Medicine, Oxford pres.
5. Gordis Leon. Epidemiology (Fifth edition), Elsevier Saunders.
6. Porta Miquel. A Dictionary of Epidemiology, Oxford University Press, USA.
7. Somerville Margaret, et al., Public Health and Epidemiology at a Glance, Second Edition, Wiley-Blackwell.
8. Spassoff R.A. Epidemiologic Methods for Health Policy, Oxford University Press.
9. Knox E. G. Epidemiology in health care planning: A Guide to the Uses of a Scientific Method, Oxford University Press, USA.

L = Lecture, **T** = Tutorial, **P** = Practical, **CC** = Core Course, **TBD** = To be decided, **SEC** = Skill Enhancement Course.

DSC-1 = Discipline Specific Core of Subject-1, **DSC-2** = Discipline Specific Core of Subject-2,

DSC-3 = Discipline Specific Core of Subject-3.

Semester-IV
Core Course (CC)

DSC-1D (CC-4): Sensory Physiology, Endocrinology and Reproductive Physiology, Renal Physiology **Credit 06**

DSC1DT: Sensory Physiology, Endocrine and Reproductive System, Renal Physiology
Credit 04

Course Contents:

Sensory Physiology

Classification of general and special senses and their receptors. Muller's law of specific nerve energetic. Weber – Fechner Law, Mechanism of transduction of stimuli from sensory receptors. Adaptation of receptors. Receptors as biological transducer. Neural pathway of touch, pressure, pain, thermal and kinaesthetic sensation.

Olfaction and Gustation: Structure of sensory organ, neural pathway of olfactory and gustatory sensation. Physiology of olfactory and gustatory sensation. Olfactory and gustatory adaptation. After-taste. Olfactometer.

Audition & Equilibrium: Sound wave, decibel, Structure of ear ,anatomic consideration, Auditory apparatus- external, middle and internal ears. Organ of Corti. Mechanism of hearing and its modern theory. Vestibular function. Discrimination of sound frequency and loudness. Auditory pathways and centres.

Vision: Structure of the eye anatomic consideration.. Structure of the lens. Error of refraction. Pupillary reflex, Light reflex. Argyll Robertson pupil. Histology of retina. Photopic and Scotopic vision. Chemical changes in retina on exposure to light. Genesis of electrical response, Visual pathway and effects of lesions of these pathways. Light reflex. Accommodation and Visual acuity. Errors of refraction. Positive and negative after-image. Light and dark adaptation. Colour vision and colour blindness. Errors in visual processes. Electroretinogram, Visual Field, Perimetry, Binocular vision.

Endocrinology:

Anatomy of endocrine system. Hormones - classification. Experimental and clinical methods of study of endocrine glands. Hormone receptor and cell signalling. Mechanism and modern concepts of hormone action. Basic concept of regulation of hormone actions. Positive and negative feedback mechanism.

Hypothalamo - Hypophysial axis: Basic concept of neurohormone. Hypothalamo-hypophyseal tract and portal system. Releasing factors, Tropic hormones, vascular and neural connections

between the hypothalamus and pituitary.

Pituitary gland: Histological structure, hormones, functions and regulation of anterior, middle and posterior lobes of pituitary. Growth hormone. Oxytocin and Vasopressin. Hypo and hyperactive states of pituitary gland.

Thyroid gland: Histological structure. Thyroid hormone: chemistry, biosynthesis, storage and transport. Functions of thyroid hormones (T_4 T_3) Thyrocalcitonin. Hypo and hyper-active states of thyroid. Regulation of thyroid hormone secretion.

Parathyroid gland: Histological structure, functions of parathyroid hormone. Role in calcium metabolism, Parathyroid hormone and bone. Tetany. Calcitonin- source, function and regulations.

Adrenal Cortex: Histological structure and functions of different hormones. Biosynthesis of adrenocortical hormone. Hypo and hyper-active states of adrenal cortex.

Adrenal Medulla: Histological structure, regulation and hormonal functions of adrenal medulla. Pheochromocytoma.

Pancreas: Histological structure of pancreatic islets. Source, regulation, mode of action and function of pancreatic hormones. Diabetes mellitus.

Brief idea of the origin and functions of renin- angiotensin, prostaglandins. Erythropoietin and melatonin. Gastrointestinal hormones- physiological functions. The endocrine function of the heart : Atrial Natriuretic Peptide and its function.

Reproductive Physiology:

Primary and secondary sex organs: Anatomy and Physiology, secondary sex characters. Puberty, Precocious & Delayed Puberty.

Testis: histology, spermatogenesis, spermiogenesis, testicular hormones and their functions, Abnormalities of the testicular function. Prostate and seminal vesicle.

Ovary: histology, oogenesis, ovarian hormones and their functions. Control of ovarian functions. Physiological mechanism of ovulation. Abnormalities of ovarian functions. Ovarian cysts.

Oestrus and menstrual cycles and their hormonal control. Fertilization, implantation and structure and functions of placenta. Placental hormone. Pregnancy : Physiological changes during pregnancy. Maintenance of pregnancy – role of hormones. Pregnancy tests, Parturition, ectopic pregnancy. Development of mammary gland. Lactation - Role of hormones, Sympathetic nervous system. Menopause. Stem cell biology.

Renal Physiology:

Structure and functions of kidney. Microanatomy of a nephron. Juxtaglomerular apparatus. Mechanism of formation of urine. Counter current system, counter current multiplier. Function of Malpighian corpuscles and renal tubule. Normal and abnormal constituents of urine and their clinical significances. Renal threshold. Physiology of urine storage and micturation. Non excretory function of kidney. Disorders of Renal Functions. Renal stone formation. Renal function tests. Dialysis and Artificial kidney.

DSC1DP: Practical**Credits 02**

1. Staining and identification of kidney and ureters.
2. Silver nitrate preparation of corneal cell space.
3. Study of estrous cycle.
4. Identification of normal and abnormal constituents of urine.
5. Tests for Urinary deposits.
6. Estimation of albumin in urine.
7. Detection of specific gravity of urine.
8. Determination of visual acuity by Snellen's chart / Landolt's chart.
9. Determination of colour blindness by Ishihara chart.
10. Exploration of conductive and perceptive deafness by tuning fork method.
11. Sperm count and sperm motility in rat.

Demonstration:

1. Study of the effects of oxytocin on uterine contraction.
2. Study of the effects of adrenaline on intestinal / uterine movements.
3. Estimation of estrogen by Spectrophotometric method.
4. Pregnancy test from human urine by kit method.
5. Quantitative estimation of Urea in Urine
6. Surgical techniques: principles of surgery in endocrinology. Ovaryectomy, hysterectomy, castration and vasectomy in rats.
12. Human vaginal exfoliate cytology.

Skill Enhancement Course (SEC)

SEC-2: Biochemical Techniques**Credits 02****SEC2T: Biochemical Techniques****Course Contents:****Unit-I: Spectroscopic Techniques**

Principle of UV- Visible absorption spectrophotometry, instrumentation and applications.
Fluorimetry: Phenomena of fluorescence, intrinsic and extrinsic fluorescence, instrumentation and applications

Unit-II: Chromatography

Basic principles of chromatography: Partition coefficient, concept of theoretical plates, various modes of chromatography (paper, thin layer, column), preparative and analytical applications, LPLC and HPLC. Principle and applications of: Paper Chromatography, Thin Layer Chromatography. Molecular Sieve Chromatography, Ion Exchange Chromatography, Affinity Chromatography

Unit-III: Electrophoresis

Basic principle of electrophoresis, Paper electrophoresis, Gel electrophoresis, discontinuous gel electrophoresis, PAGE, SDS-PAGE, Native and denaturing gels. Agarose gel electrophoresis, buffer systems in electrophoresis. Electrophoresis of proteins and nucleic acids, protein and nucleic acid blotting, detection and identification. Molecular weight determination, Isoelectric Focusing of proteins

Unit-IV: Centrifugation

Principle of centrifugation, basic rules of sedimentation, sedimentation coefficient, various types of centrifuges, different types of rotors, differential centrifugation, density gradient centrifugation (Rate zonal and Isopycnic)

Suggested Readings:

1. Human Molecular Genetics, 3rd edition (2003), Tom Strachan and Andrew Read; Garland Science Publishers.
2. Physical Biochemistry: Applications to Biochemistry and Molecular Biology, 2nd edition (1982), David Freifelder, W.H. Freeman and Company.
3. Principles and Techniques of Biochemistry and Molecular Biology 7th edition (2010), Wilson K and Walker J. Cambridge University Press, 2010.
4. Principles of Gene Manipulation and Genomics, 7th edition (2006), S.B. Primrose and R.M. Twyman. Blackwell Scientific
5. Molecular Biotechnology: Principles and Applications of Recombinant DNA, 4th edition (2009), Bernard R. Glick, Jack J. Paternack, Cheryl I. Patten. ASM press,
6. Molecular Cloning: A Laboratory Manual, 4th edition (2012), Three-volume set by Michael R. Green, Joseph Sambrook; Cold Spring Harbor Laboratory Press,
7. Culture of Animal Cells: A Manual of Basic Technique and Specialized Applications, 6th edition (2010),

Or

SEC-2: Medical Diagnostics

Credits 02

SEC2T: Medical Diagnostics

Course Contents:

Unit-1: Biomedical basis of Diseases

Infectious diseases (Bacterial, Viral, Protozoan); Inherited/genetic diseases (Diabetes, Hypertension); Immunological diseases [Autoimmune hemolytic anemia (AHA), Di George's Syndrome, Systemic Lupus Erythematosus (SLE)]; Cancer- Nature/ types; Treatment, Relation of pathogenesis to symptoms, diagnosis and treatment.

Unit-II: Analytical Technology

Brief and relevant description of the following Wet techniques: UV Chromatography Methods- LC, HPLC and GC-MS Nuclear Magnetic Resonance Spectroscopy (NMR) Atomic Force and Scanning Electron Microscopy (AFM and SEM) Electrochemistry Molecular Modeling and Chemical Databases

Unit-III: Diagnostic Methods

Outline methods used in hospital histopathology, biochemistry, hematology and microbiology laboratories. Theoretical knowledge - ECG, Echo, X-ray, CT, MRI, PET, Ultrasonography.

Suggested Readings

1. Bailey and Scott's Diagnostic Microbiology, 12th edition (2007), Betty A. Forbes, Daniel, F. Sahm and Alice S. Weissfeld; Mosby Elsevier Publishers.
2. Medical Laboratory Technology Methods and Interpretations Volume 1 and 2, 6th edition (2009), Ramnik Sood; Jaypee Brothers Medical Publishers.
3. Current Protocols in Human Genetics, 1st edition (1994), Dracopoli and Nicolas C. Dracopoli; John Wiley and Sons, Inc.,
4. Molecular Cloning: A Laboratory Manual, 4th edition (2012), Michael R. Green and Joseph Sambrook; Cold Spring Harbor Laboratory Press,
5. Microbiology: A Laboratory Manual, 10th edition (2013), James Cappuccino and Natalie Sherman, Benjamin Cummings,

Or

SEC-2: Instrumentation Techniques in Biology

Credits 02

SEC2T: Instrumentation Techniques in Biology

Course Contents:

Unit-I: Basics of Microscopy-Features, Working principle, Advantages and limitations - Introduction- Bright field Microscopy - Dark Field Microscopy, Light microscopy-Construction and working of compound microscope - Phase contrast microscopy - Electron microscopy-TEM, SEM

Unit-II: Staining methods - Simple staining; Gram staining - Lacto-phenol cotton blue staining

Unit-III: Optical Methods - Features, Working principle, Advantages and Limitations - Absorption Methods; Ultraviolet Spectrophotometer; Infrared spectrophotometer - Emission methods; Atomic Absorption Spectrophotometer (AAS) Flame Photometry

Unit-IV: Chromatography methods - Features, Working principle, Advantages and Imitations High performance liquid chromatography (HPL Gas Chromatography

Unit-V: Biotechnology and Immunological techniques- Features, Working principle, Advantages and limitations - Electrophoresis –Introduction, Types of electrophoresis, Agarose gel electrophoresis, Gradient gel electrophoresis, DNA finger printing PCR Technique ELISA (Enzyme Linked Immuno Sorbant Assay)

Suggested Readings:

1. A. R. Murugesan and C. Rajakumari, Environmental Science and biotechnology-Theory and Techniques, MJP Publishers.
2. M. L. Srivastava, Bioanalytical Techniques, Narosa Publishing House.
3. R.Gopalan, P.S.Subramanian and K.Rangarajan, Elements of Analytical Chemistry, Sultan Chand and Sons.
4. S.Sadasivam and A. Manicham, Biochemical methods, New Age International Publishers.

Discipline Specific Electives (DSE)

DSE-1A: Sports Physiology, Work Physiology and Ergonomics

Or

DSE-1A: Environmental Physiology

Or

DSE-1A: Community Nutrition and Public Health

Or

DSE-1A: Biostatistics

Skill Enhancement Course (SEC)

SEC-3: Maternal and Child Nutrition

Or

SEC-3: Nutrition and Fitness

Semester-V

Discipline Specific Electives (DSE)

DSE -1A: Sports Physiology, Work Physiology and Ergonomics Credits 06

DSE1AT: Sports Physiology, Work Physiology and Ergonomics Credits 04

Course Contents:

Sports & work Physiology: Concepts of Physical work and Physiological work. Physical work: Definition and units of measurement. Classification of Physical work. Classification of workloads. Differences between work and sports. Energetic of muscular works. Measurement of energy cost for various Physical Work. Cardiovascular and respiratory changes during graded exercise. Aerobic and anaerobic capacity. Maximum aerobic power.

Exercise Physiology. Exercise & Performance. Exercise Physiology & Gender. Environmental Exercise Physiology. Maximal oxygen consumption and post exercise oxygen consumption – definition, factors affecting, measurement and significance. Muscle fatigue and recovery. Tests for Physical work capacity – measurement with Bicycle Ergo meter, Tread Mill and Harvard Step Test. Work rest cycle and importance of rest pause.

Physical Training: General Principles and different methods. Effects of overtraining and detraining. Nutrition in sports – nutrient and caloric requirements for different kinds of sports. Sports injury and its management. Sports rehabilitation and sports medicine. Role of sports in emotion and social factors. Basic concepts of sports psychology. Sports Biochemistry. Ergogenic aids. Ergogenic aids & Dietary supplement.

Ergonomic – Basic concepts and its application in industry to improve efficiency. Ergonomics- importance of ergonomics in occupational health and well beings. Physical work environment. Occupational hazards- Physical, Biochemical Hazards. Occupation diseases – Silicosis, Asbestosis, Farmer’s Lung. Industrial safety.

Anthropometry: Anthropometry and its implication in general. Different body dimension measures in anthropometry and their significances. Sports Anthropometry.

DSE1AP: Sports Physiology, Work Physiology and Ergonomics (Practical) Credits 02

List of Practical

1. Measurements of resting and working heart rate using thirty beats and ten beats methods respectively.
2. Measurement of blood pressure before and after different graded exercise.

3. Determination of Physical Fitness Index (PFI) of an individual and recording of recovery heart rate after standard exercise.
4. Determine cardiac cost of specific work.
5. Determination of $VO_{2\max}$ by Queen College step test.
6. Determination of endurance time by hand grip dynamometer.
7. Six minutes walk tests.
8. Measurement of some common anthropometric parameters – stature, weight, eye height(standing), shoulder height, sitting height, knee height (sitting), arm reach from wall, mid – arm circumference, waist circumference, hip circumference, neck circumference, head circumference, chest circumference.
9. Determination of body surface area (using a nomogram) and Body Mass Index (BMI) for an anthropometric measurement.
10. Measurement of body fat percentage.

Or

DSE-1A: Environmental Physiology

Credits 06

DSE1AT: Environmental Physiology

Credits 04

Course contents:

Ecosystem – structure and function, different types of ecosystem, food chains, food webs and energy flow and mineral cycling in ecosystems; primary production and decomposition, Biogeochemical cycle. Global environmental problems: global climate change, ozone layer depletion, the green house effect, global warming and its consequences.

Environment – Physical and biological aspects. Effects of exposure to hot and cold environment. Acclimatization to hot and cold environment. Heat disorders and its preventive measures. Effects of hypobaric and hyperbaric environment. Caisson disease. Mountain sickness. Acclimatization to high altitudes. Preventive measure for hypobaric and hyperbaric effects. Physiological effects and preventive measures against G force, noise, vibration and radiation. Types of pollutants (Primary, secondary and tertiary).

Environmental Pollutions and Health Hazards: Concept of hygiene, health and public health. Air, water, food borne diseases: causes, symptoms and control. Food Additives and Adulterants: definition, examples and human health hazards. Vector Borne Epidemic Diseases: Malaria and Plague- aetiology and control.

Air Pollution: definition, sources, air pollutants, effects of air pollution on human health. Water Pollution: definition, types, health hazards, water pollutants, biochemical oxygen demand (BOD), thermal pollution, concept of safe drinking water standards. Soil Pollution: causes, health hazards, solid waste management, bioremediation, phyto-remediation. Sound Pollution: definition, concept of noise, source of sound pollution, effects of sound pollution on human health, noise index (noise standards). Radionuclide Pollution: ionizing radiations, effects of ionizing radiation on human health, permissible doses. Source, health problems and preventions

of Bio- medical waste. Environment and Health impacts assessment – Concept, Steps and application. Brief idea about biotransformation, bioaccumulation, biomagnifications. Population over growth and its effects on health. Xenobiotics. Impacts of green house effects in life. Human health, permissible doses.

Environmental management: Environmental ethics. Conservation of topsoil, ground water and wild lives; rain water harvesting; sanctuary, national park, biosphere reserve, wildlife (conservation) Act, 1992.

DSE1AP: Environmental Physiology (Practical)

Credits 02

Practical:

A:

1. Measurement of environmental temperature – dry bulb and wet bulb, relative humidity, air velocity.
2. Determination of O₂, CO₂, BOD & COD
3. Determination of total alkalinity and chlorine in water.
4. Determination of dissolve oxygen in the supplied water samples-supplied water, ground water extracted by shallow and deep tube wells, stream waters, pond water etc.
5. Detection of food additives in different food samples.
6. Biochemical estimation of serum glucose, total proteins, SGPT and SGOT
7. Detection of food additives in different food samples.
8. Determination of light intensity (at library, laboratory, and class room) by lux meter.
9. Determination of sound levels by sound level meter and noise index.

B:

Physiological (experimental) Experiments (Demonstration)

1. Kymographic recording of the effects of Hg, Pb , As compounds and food additives on the movements of perfused heart of toad.
2. Kymographic recordind of the effects of Hg, Pb , As compounds and food additives on the intestinal movements of rats in Dale's bath.

C: Histo - chemical Experiments (Demonstration)

Histochemical studies: chronic effects of food additives and arsenic compounds on liver, kidney, intestine, brain, muscle and lung tissues in rat.

Or

DSE-1A: Community Nutrition and Public Health

Credits 06

DSE1AT: Community Nutrition and Public Health

Credits 04

Course contents:

Population, society, community and community health: concepts. Nutrition - introduction. Food as source of nutrients, functions of food, definition of nutrition, Nutrients & energy. Adequate, optimum & good nutrition. Malnutrition and under nutrition, Over nutrition. Human Nutrition- Principle, Interrelationship between nutrition, health& diseases. Visible symptoms of good health. Nutrition - fitness, athletics & sports.

Food guide - Basic food groups. Use of food guide (according to R.D.A.). Use of food in body - digestion, absorption, transport & utilization. ACU- concept.

Balanced diet. Diet Survey – Principles. Composition and nutritional value of common Indian food stuff - rice, wheat, pulses, egg, meat, fish and milk. Dietary fibres - role of fibers in human nutrition. Calorie requirement. Vitamins and Minerals. Malnutrition and under nutrition.

Principles of formulation of balanced diets for growing child, adult man and woman, pregnant and lactating woman. Diet management of obese, diabetic, hypertensive person and athlete. Basic idea on PCM, marasmus, kwashiorkor and their prevention. Iron and Iodine deficiency. Recommended dietary allowances, malnutrition and chronic energy, LBW, PEM, Xerophthalmia, micronutrient disorders. Physiology of starvation and obesity. Food toxicity. Effect of processing on nutritive values of foods.

Socio ecology of nutrition, Habitual diets in India and their adequacy. Nutritional assessment of human and community. Malnutrition in a community. National nutritional related health program.

Epidemiology : Concepts. Public health and public health issues: Basic ideas. Etiology, epidemiology and prevention of malaria, dengue, filarial, hepatitis, AIDS, nutritional anemia, atherosclerotic disorders. Cause and management of thalassemia, gout, obesity, endemic goiter, dental carries.

Population problem – principles and methods of family planning and Assisted Reproductive Technology. Sound pollution as a community health issue; definition, concept of noise, source of extraordinary sound, effects of sound pollution on human health, noise index (noise standards).

DSE1AP: Community Nutrition and Public Health (Practical)

Credits 02

Practical:

1. Quantitative estimation of glucose, sucrose by Benedict's method.
2. Estimation of lactose from milk by Benedict's methods.
3. Estimation of Chloride by Mohr's methods.
4. Estimation of amino nitrogen through formol titration methods.

5. Qualitative analysis of pulse, rice, milk to test the presence of carbohydrates, protein, fat.
6. Qualitative identification of lipids and cholesterol.
7. Qualitative assessment of noise by sound level meter.

Field Survey Report:

1. Survey on the status of dietary intake in the surrounding area through visits, etc.

Or

2. Diet survey report of a family (as per ICMR specification). Each student has to submit a report on his/her own family. [Report should be as per ICMR specification. Report should be hand written].
3. A report (hand-written) on the basis of field survey from one of the followings:
 - (1) Physiological parameters of human (at least three parameters).
 - (2) Anthropometric measurements on human (at least three parameters).

Or

DSE-1A: Biostatistics

Credits 06

DSE1AT: Biostatistics

Credits 04

Course Contents:

Scope of statistics– utility and misuse. Principles of statistical analysis of biological data. Basic concepts –variable. Population and Sampling -- parameter, statistic. Presentation of data frequency distribution, frequency polygon, histogram, bar diagram and pie diagram. Different classes of statistics-mean, median, mode, mean deviation, variance, standard deviation, standard error of the mean, Standard score. Degrees of freedom, Probability. Normal distribution. Student's t- distribution. Testing of hypothesis-Null hypothesis, errors of inference, levels of significance, t- test and z score for significance of difference. Distribution-free test - Chi-square test. Linear correlation and linear regression

DSE1AP: Biostatistics (Practical)

Credits 02

Practical:

1. Computation of mean, median, mode, standard deviation and standard error of the mean with physiological data like body temperature, pulse rate, respiratory rate, height and weight of human subjects.
2. Graphical representation of data in frequency polygon and histogram.
3. Student's t test for significance of difference between means.
4. Demonstration: Statistical analysis and graphical representation of biological data with computer application program (Microsoft Excel).

Skill Enhancement Course (SEC)

SEC- 3: Maternal and Child Nutrition

Credits 02

SEC3T: Maternal and Child Nutrition

Course Contents:

Unit - I

- Nutritional needs during pregnancy, common disorders of pregnancy (Anaemia, HIV infection, Pregnancy induced hypertension), relationship between maternal diet and birth outcome.
- Maternal health and nutritional status, maternal mortality and issues relating to maternal health.

Unit - II

- Nutritional needs of nursing mothers and infants, determinants of birth weight and consequences of low birth weight, Breastfeeding biology, Breastfeeding support and counselling

Unit - III

- Infant and young child feeding and care - Current feeding practices and nutritional concerns, guidelines for infant and young child feeding, Breast feeding, weaning and complementary feeding.
- Assessment and management of moderate and severe malnutrition among children, Micronutrient malnutrition among preschool children
- Child health and morbidity, neonatal, infant and child mortality, IMR, U5MR and MMR; link between mortality and malnutrition;

Unit - IV

Overview of maternal and child nutrition policies and programmes.

Or

SEC-3: Nutrition and Fitness

Credits 02

SEC3T: Nutrition and Fitness

Course Contents:

Unit -1: Understanding Fitness

- Definition of fitness, health and related terms
- Assessment of fitness
- Approaches for keeping fit

Unit- 2: Importance of nutrition

- Role of nutrition in fitness
- Nutritional guidelines for health and fitness
- Nutritional supplements

Unit -3: Importance of Physical activity

- Importance and benefits of physical activity
- Physical Activity – frequency, intensity, time and type with examples
- Physical Activity Guidelines and physical activity pyramid

Unit - 4: Weight Management

- Assessment, etiology, health complications of overweight and obesity
- Diet and exercise for weight management
- Fad diets
- Principles of planning weight reducing diets

Discipline Specific Electives (DSE)

DSE-1B: Microbiology, Immunity and Biotechnology

Or

DSE-1B: Developmental aspects of embryo and foetus

Or

DSE-1B: Clinical Biochemistry

Or

DSE-1B: Clinical Hematology

Skill Enhancement Course (SEC)

SEC-4: Environmental Surveillance

Or

SEC-4: Health Psychology, Physiology of stress and Stress Management

Or

SEC-4: Pharmacology and Toxicology

Semester- VI

Discipline Specific Electives (DSE)

DSE-1B: Microbiology, Immunity and Biotechnology

Credits 06

DSE1BT: Microbiology, Immunity and Biotechnology

Credits 04

Course Contents:

Microbiology:

Viruses: DNA & RNA Viruses. Viroids and Prions. Bacteriophages – structure & morphological classification. Bacteria: structure, classification. Staining :- Principal, procedure, uses. Gram stain, Acid – fast stain, Albert stain. Pathogenic and non - pathogenic bacteria. Nutritional requirements of bacteria, nutritional types culture media. Bacterial Growth curve- Preparation, physiological factors required for growth. Bacterial metabolism: fermentation (ethanol, lactic acid, acetic acid), glyoxalate cycle, Entner – Doudoroff pathway, Phosphoketolase pathway. Bacterial Genetics: elementary idea of transformation, conjugation and transduction. Sterilization, disinfection and pasteurization: Physical and chemical methods used. Antibiotics, Bacteriostatic & Bacteriocidal agents. Bacteriolytic agents. Concepts of antiseptic, probiotics and prebiotics. Basic idea about medical bacteriology, virology and mycology.

Immunity and Vaccination: Elementary knowledge of innate and acquired immunity. Humoral and Cell mediated immunity. Toxin and toxoids. Vaccination : Principles and importance. Passive and active immunisation. Types and uses of vaccine.

Biotechnology: History and importance. DNA and RNA. Gene, Genome and Genetic code, translation. Recombinant DNA technology : concepts, techniques and application., DNA manipulation. Cloning – concept and significances. Cloning vectors. c DNA libraries. DNA sequencing. Basic concepts of Southern, Northern, Western blot techniques and DNA micro array. Polymerase Chain Reaction (PCR). RT-PCR- Basic concepts. Enzyme immobilization: basic concepts. Tissue culture – basic concepts. Human genome projects. Transgenic animals. Hybridoma techniques- Basic concepts. Monoclonal antibody. Protein interaction technology. DNA technology and gene therapy. DNA technology in diseases diagnosis. Genetic Barcode. Fermentation technology: Fermentation, types, bioreactors, Upstream and downstream processing. Physiology and biotechnology process. Bio-pesticides, bio plastics, biosensors, biochips: concepts and significances. Bio-safety and intellectual property Rights. Genomics and Proteomics.

DSE1BP: Microbiology, Immunity and Biotechnology (Practical)

Credits 02

Practical

1. Study disinfection and sterilization techniques.
2. Culture procedure and isolation of bacteria.
3. Gram staining techniques of bacteria. Acid- fast staining of bacteria. Spore Staining.
4. Isolation of DNA from blood.

5. Separation of DNA by agarose gel electrophoresis. Extraction of DNA from agarose gel.
6. Prepare SDS-PAGE for protein.
7. Perform immunodiffusion by Ouchterlony methods.
8. Biochemical characterization of microorganisms (**Demonstration**).
9. DNA and Protein quantification (**Demonstration**)
10. Analysis of DNA sequences (**Demonstration**).
11. Application of PCR (**Demonstration**).
12. Prepare ELISA (**Demonstration**).
13. Perform Immunoprecipitation (**Demonstration**).

Or

DSE-1B: Developmental aspects of embryo

Credits 06

DSE1B T: Developmental aspects of embryo

Credits 04

Course Structure:

Theoretical concepts:

General concepts of reproductive system. Stem cell : Characteristics and applications.
 Gametogenesis: Spermatogenesis and Oogenesis. Sperm and Ovum of mammals: ultra structure.
 Egg membrane. Fertilization in mammals.
 Cleavage: Cleavage plane, types, role of yolk in cleavage; Cleavage process in mammals.
 Blastula formation : Mammals. Morphogenetic movements : types and examples.
 Gastrulation : Mammals general concepts of induction, determination and differentiation.
 Organogenesis : Development of eye as an example of reciprocal and repeated inductive events.

DSE1BP: Developmental aspects of embryo (Practical)

Credits 02

List of Practical

1. Hematoxylin and Eosin staining of testicular, ovarian tissue sections.
2. Identification of spermatocytes, spermatids, Graafian follicle, Corpus Luteum.
3. Demonstration of preserved mammalian embryo.

Or

DSE-1B: Clinical Biochemistry

Credits 06

DSE1BT: Clinical Biochemistry

Credits 04

Course Contents:

Unit 1: Introduction: Organization of clinical laboratory, Introduction to instrumentation and automation in clinical biochemistry laboratories safety regulations and first aid. General

comments on specimen collection, types of specimen for biochemical analysis. Precision, accuracy, quality control, precautions and limitations.

Unit 2: Evaluation of biochemical changes in diseases: Basic hepatic, renal and cardiovascular physiology. Biochemical symptoms associated with disease and their evaluation. Diagnostic biochemical profile. Pathophysiological significances of glucose, serum protein, albumin, urea, creatinine, uric acids, ketone bodies. Pathophysiological significances of following enzymes : Lactate dehydrogenase, Creatinine kinase, Amylase, Acid and alkaline phosphatase, beta glucuronidase, SGPT & SGOT.

Unit 3: Assessment of glucose metabolism in blood: Clinical significance of variations in blood glucose. Diabetes mellitus. Glycosylated Hb.

Unit 4: Lipid profile: Composition and functions of lipoproteins. Clinical significance of elevated lipoprotein. Lipid profile in health and diseases.

Unit 5: Liver function tests: Structure of the liver, liver function tests, causes of different liver diseases, liver function tests in the diagnosis of liver diseases. Pathophysiological significance of bilirubin.

Unit 6: Renal function tests and urine analysis: Composition of urine. Use of urine strip / dipstick method for urine analysis. Basic ideas on different types of test for renal diseases.

Unit 7: Tests for cardiovascular diseases: Involvement of enzymes in diagnostics of heart disease including aspartate transaminase, isoenzymes of creatine kinase and lactate dehydrogenase and troponin.

DSE1BP: Clinical Biochemistry (Practical)

Credits 02

List of Practical

1. Collection of blood and storage. Separation and storage of serum.
2. Estimation of blood glucose by glucose oxidase peroxidase method.
3. Estimation of blood glucose by Nelson – Somogyi method.
4. Estimation of blood inorganic phosphates by Fiske- Subbarao method.
5. Estimation of serum total protein by Biurate methods, and determination of albumin globulin ratio.
6. Estimation of triglycerides.
7. Estimation of bilirubin (direct and indirect).
8. Quantitative determination of serum creatinine and urea.
9. Determination of serum amylase by iodometric method.
10. Estimation of creatine kinase.

Or

DSE-1B: Clinical Hematology

Credits 06

DSE1BT: Clinical Hematology

Credits 04

Course Contents:

Anemia and its classification. Laboratory investigation and management of anemia. Iron deficiency anemia, megaloblastic anemia, pernicious anemia- pathogenesis and laboratory investigation. Reticulocytes. Aplastic anemia- laboratory diagnosis. Bone marrow examination. Aspiration techniques.

Hemoglobin - abnormal hemoglobin. Hemolytic anemia and its laboratory investigation. Haemoglobinopathies. Hemoglobin electrophoresis. Sickle cell anemia , Thalassemia- laboratory diagnosis.

Blast cell. Causes and significances of leucocytosis, leucopenia, neutrophilia, eosinophilia, basophilia, monocytosis, lymphocytosis, neutropenia, lymphopenia. Toxic granulation. Leukemia and its classification. HIV on blood cell parameters. LE cells and its significances. Blood parasites.

Hemostasis and Coagulation: Platelet development. Qualitative and quantitative disorders of platelets. Secondary hemostasis. Hemophilia, Willebrand diseases. Disorder of fibrinogen. Fibrinolysis. Bleeding and coagulation disorders.

Blood groups: Immunological basis of identification of ABO and RH blood groups. Biochemical basis of ABO system and Bombay phenotyping. Others blood groups : Kell, Kidd, Duffy, etc. Blood transfusion. Blood banking.

Definition determination and significance of TC, DC ,ESR, Arnth count, PCV, MCV, MHC, MCHC. bleeding time, clotting time, prothrombin time.

DSE1BP: Clinical Hematology (Practical)

Credits 02

List of Practical

1. General blood picture
2. Differential Leucocyte Count. Absolute leucocyte count
3. Determination of haemoglobin by various methods.
4. Determination of total RBC count and WBC count.
5. Determination of PCV
6. Determination of red cell indices
7. Determination of ESR.
8. Determination of reticulocyte count.
9. Staining of bone marrow
10. Determination of blood groups.

11. Determination of toxic granulation of neutrophil
12. Determination of total platelet count.
13. Demonstration of thrombin time.(**Demonstration**)
14. Perform sickling test (**Demonstration**)
15. Perform Heinz bodies(**Demonstration**)
16. Demonstration of leukemic slides (**Demonstration**).
17. Determine fibrinogen conc.(**Demonstration**)
18. Demonstrate malarial slide(**Demonstration**)
19. Haemoglobin electrophoresis(**Demonstration**)

Skill Enhancement Course (SEC)

SEC- 4: Environmental Surveillance

Credits 02

SEC4T: Environmental Surveillance

Course Contents:

UNIT – I: Environmental Surveillance Monitoring – definition, advantages, disadvantages, scale of observation, GEMS and its goal current and future status of environmental surveillance and monitoring

UNIT - II: Types of Environmental surveillance, systematic ground surveys (SGS), soil, surface water and air surveillance – parameters and instruments, standards, sensors and RUSS, Surveillance devices, Social Network Analysis

UNIT - III: Water quality surveillance and air, water and health, Water quality and sanitary inspection data collection. Sampling site selection and sample approaches. Systematic aerial reconnaissance flight surveillance, using the surveillance data, Household water and the safe water chain

UNIT – IV: Biological surveillance programme for the monitoring of crop pests, Biometric surveillance – aquatic bodies, various invertebrates and vertebrate vectors surveillance, Biomarkers in environmental surveillance

UNIT - V: Disease surveillance (of pathogens) – Definition, World Health Organization AIDS surveillance case definition, Anthrax, Avian influenza, Dengue hemorrhagic fever, Hepatitis, Influenza, Plague, Severe Acute Respiratory Syndrome, Smallpox

Or

SEC-4: Health Psychology, Physiology of stress and Stress Management

Credits 02

SEC4T: Health Psychology, Physiology of stress and Stress Management

Course Contents:

Health Psychology:

Introduction: Definition, Mind-body relationship, Bio-psychosocial model of Health, Life styles and disease patterns. Behaviour and Health: Characteristics of health behaviour; Barriers to health behaviour; Theories of health behaviour and their implications. Health Enhancing Behaviour: Exercise, nutrition, accident prevention, pain and stress management. Health and Well-being: Happiness; Life satisfaction; Resilience; Optimism and Hope.

Physiology of Stress:

Stress: Definition, Nature of stress, symptoms of stress. Physical and Emotional Stressors. General Adaptation Syndrome. Role of Hypothalamic - Pituitary- Adrenal Axis and Sympatho-adrenal Medullary Axis in coping stress. Effects of chronic stress: Immunological, Cardiovascular, Emotional problem.

Stress Management

Various sources of stress: environmental, social, physiological and psychological. Stress and health: effects of stress on health, eustress, distress. Managing stress: Methods - yoga, meditation, relaxation techniques, Problem focused and emotion focused approaches.

Or

SEC- 4: Pharmacology and Toxicology

Credits 02

SEC4T: Pharmacology and Toxicology

Credit 01

Course Contents:

Unit I: General pharmacology and toxicology

Nature and source of drugs, routes of drug administration and their advantages, definitions and scope of toxicology. Introduction to eco-toxicology.

Unit II: Mechanism of toxicity

Formation of ultimate toxicant of xenobiotics and its interaction with target molecules.

Unit III: Pharmacokinetics

Membrane transport, absorption, distribution of xenobiotics. Brief introduction to biotransformation, Phase- I reactions including oxidations, hydrolysis, reductions and phase II conjugation reactions and excretion of drugs.

Unit IV: Pharmacodynamics

Mechanism of drug action, receptors and receptors subtypes, Dose response relationship and combined effect of drugs. Concept of LD50, LC50, TD50 and therapeutic index.

Unit V: Introduction and classification of the drugs acting on:

- a. Central and autonomic nervous system, neurotoxic agents.
- b. Cardiovascular system and cardiotoxic agents.
- c. Kidney and nephrotoxic agents.

Unit VI: Introduction and classification

- a. Anti-inflammatory and analgesic drugs and their related toxicity.
- b. Endocrine drugs
- c. Antimicrobial chemotherapeutic drugs

SEC4P: Pharmacology and Toxicology

Credits 01

Practical

1. To study presence of paracetamol /aspirin in the given sample.
2. Determination of Dissolved water (DO) using Winkler's method.
3. To determine the total hardness of water by complexometric method Using EDTA.
4. To determine Acid value of the given oil sample.
5. Calculation of LD50 value of an insecticide from the data provided.
6. Handling of laboratory animals and various routes of drug administration (**Demonstration**).
7. Separation of a mixture of benzoic acid, beta- naphthol and naphthelene by solvent extraction and identification of their functional groups (**Demonstration**).
8. Pharmacodynamics : dose- response curve (**Demonstration**).
